Clinical validation of the M12 CpG risk model across independent cohorts
A. Survival stratification in the training cohort
HR=2.88 (2.05-4.05)
Log-rank P = 2.32e-10
Overall Survival Probability
Time (Years)
Low Risk
High Risk
B. External validation in GSE39279 (recurrence-free survival)
Log-rank P = 2.21e-02
Recurrence-Free Survival Probability
Time (Months)
Low Risk
High Risk
C. External validation in GSE30219 (overall survival)
Log-rank P = 2.33e-03
Overall Survival Probability
Time (Months)
Low Risk
High Risk
D. Calibration (3-year)
Slope=1.23, R²=0.84
Observed event rate
Predicted risk
